

(Unclassified // FOUO)
CSWC Operational Period Summary
1800 April 26 2018 to 0600 April 27 2018

PRESCRIBED FIRE

REDUCES WILDFIRE RISK & HELPS
PROTECT OUR COMMUNITIES

Prescribed fire is one way CAL FIRE & other land managers help reduce wildfire risk & protect our communities. Every acre that burns under favorable conditions helps prevent the larger, unwanted fire & its smoke event.

WEATHER SYNOPSIS BY REGION

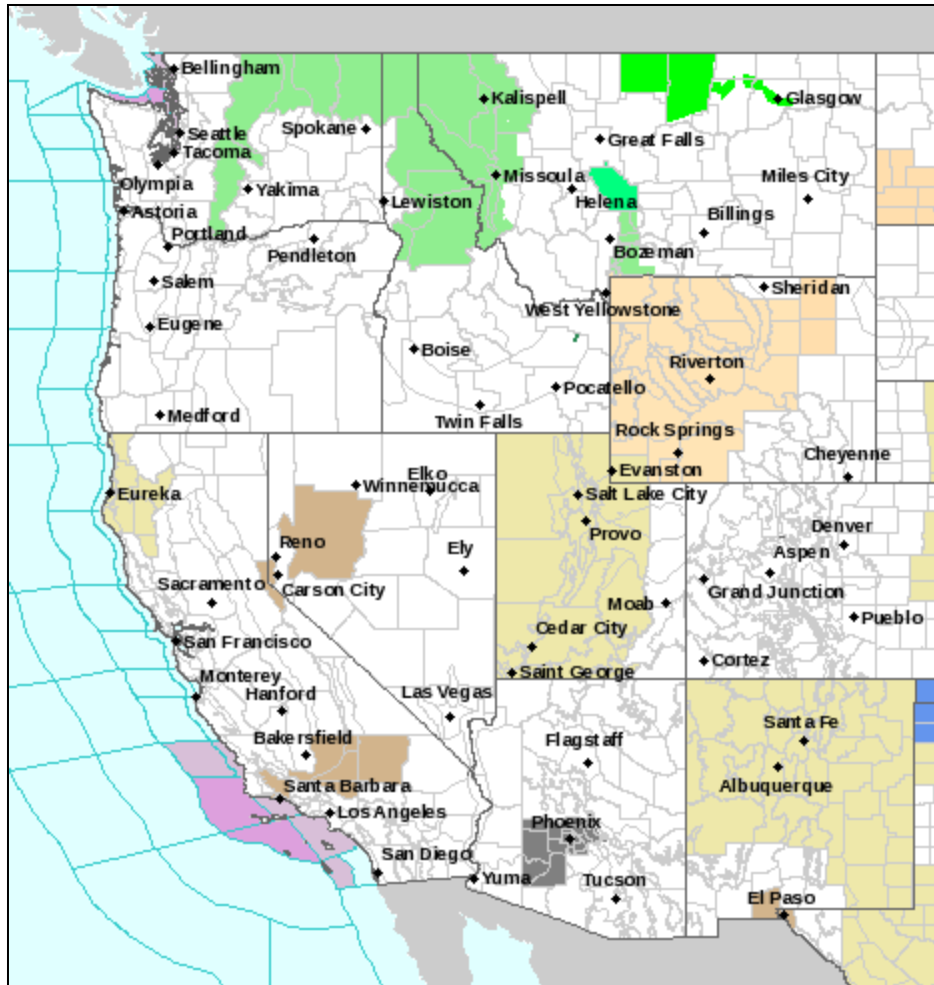

NORTHERN CALIFORNIA

The ridge that has been so dominant the past few days will gradually break down due to a low pressure system (cut off low) that has been looming off the coast. As the low pressure system progresses eastward, the atmosphere will become unstable and will cool. Showers and some thunderstorms will develop especially favoring the afternoon periods today through Sunday. The Northwestern Mountain Predictive Service Area (PSA) and Northeastern California PSA will be favored with the precipitation and expect some wetting results. Pre-frontal southerly winds will begin to increase today but will peak this afternoon prior to a weak cold frontal passage. Expect peak gusts between 20 to 30 mph favoring areas along and to the east of the Sierra and Cascade ranges. Humidity values will trend higher during this period but a few teens will be possible across the Far Eastside PSA when the stronger wind flow occurs this afternoon. The weather models seems to be a little more in agreement with kicking the low pressure system off to the east early next week and building a ridge in it's place. Some lighter, residual showers may remain but cloud cover will begin to thin and temperatures will warm. A semi-breezy drier, N-NE wind flow scenario could develop early next week but confidence is still low on the timing and overall progression of the cut off low. Very typical for this time of year.

SOUTHERN CALIFORNIA

The low pressure area and its associated trough will push inland today and stay in place through the middle of next week bringing near to below normal temperatures to the region. The marine layer will become deep, with morning low clouds and fog making it up to the lower coastal mountain slopes. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the mountain ridges and desert passes today through early next week. Scattered showers and thunderstorms will be possible over the Sierra and Southern California in the Monday through Wednesday time frame.
